## Part III DETAILED ACTION

1. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Japan on 3/12/2001. It is noted, however, that applicant has not filed a certified copy of the foreign application 2000-067532 filed on 03/10/2000.

## Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in-
- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).
- 3. Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by <u>Hollstrom et al.</u> (6,763,247).

With regard to claim 1, <u>Hollstrom et al.</u> teaches a printing method (reads on fig. 1) in which a portable communication

terminal (1) to a printer (30), and image data (col. 3, line 49 thru col. 4, line 47) of an image stored (220, and/or 220 or 230) in the portable communication terminal (1) is inputted to the printer, which prints the image wherein: a displaying device (13) of the portable communication terminal displays the image; and the displaying device displays print information for printing the image to also work as a displaying device of the printer when the print information is inputted (e.g. col. 3, line 49 thru col. 4, line 47, and col.6, lines 1-46).

With regard to claims 2-4, <u>Hollstrom et al.</u> teaches wherein the image data is obtained from another apparatus or obtained by a camera (50) function of the portable communication terminal, with a control device of the portable communication terminal also works as a control device for inputting the print information to the printer (e.g. abstract, col. 3, line 49 thru col. 4, line 47, and col.6, lines 1-46).

With regard to claim 5, <u>Hollstrom et al.</u> teaches wherein the print information includes at least one of the number of prints, zooming information, trimming information, brightness, chromaticity information and print start (e.g. col. 6).

With regard to claims 6-9, the limitations of claims 6-8 are covered by the limitations of claims 1-5 above; and <u>Hollstrom et al.</u> further teaches the communication device (1) and the first

connecting device that is connected to a printer and second device (see fig. 1).

With regard to claim 10, Hollstrom et al. inherently teaches the print medium is an instant print film and the printing device comprises a light emission head that exposed the instant film according to the print information and a spread device that spreads developer in the instant print film exposed by the light emission head (e.g. col. 4, the ability of printing picture, allows the printing device to print on film exposed by the print head having different colors that are exposed into the film).

## Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

<u>Cook</u> (6,788,332) teaches a wireless imaging device and system.
<u>Castell et al.</u> (6,717,801) teaches a standardized RF module
insert for a portable electronic processing device.

<u>Kakuta et al.</u> (6,714,965) teaches a group contacting system, and recording medium for storing computer instructions for executing operations of the contact system.

Shiohara (6,445,412) teaches a highspeed image selecting method and digital camera having highspeed image selecting function.

<u>Parulski et al.</u> (6,122,526) teaches a cellular telephone and electronic camera system with programmable transmission capability.

Rossi (5,664,013) teaches an embedded notepad system for a cellular telephone.

Oliver (EP 0830000A2) teaches an apparatus and method for connecting phone to portable image capture device.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Gabriel I. Garcia** whose telephone number is (703) 305-8751. The examiner can normally be reached Monday-Thursday from 7:30 AM-6:00 PM. The fax phone numbers for this group is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 306-0377.
